

ABSTRACT

In the economic development of any country, the existence of natural reserves plays a very important role. The availability and the exploitation of these Natural Reserves are the hidden forces that add value to country's global worth and continuous input to economic growth. Since these are deep inside and need to be explored and exploited, hence lots of visible and invisible hazards are always found there as the potential threat to environment and the masses in vicinity. Hence, CSR corporate social responsibility activities are performed by all the organizations involved in this activity. During the process of digging out of wells of oil and gas, it effects the environment of area and to compensate the local population. The multinational firms start and provide the basic facilities of road networking, health, water supply and schools in areas. This research deals with the oil and gas firms working in Dadu District There are four major oil and gas firms named OPPL, ENI, Polish oil and gas company and BGP company are working to un-earthen the oil and gas in Dadu district. In Johi taluka of Dadu district, Sindh province, the OPPL company extracting major quantity of oil and gas. The qualitative research method and focus group discussion are used as tool. This involved the application of both qualitative and quantitative techniques in data gathering, analysis, and conclusion. The qualitative aspect of this research involved gathering descriptive research data from local population, such as people's real life and conscious experiences about CSR activities Qualitative aspect uses semi structured interviews to collect the different perspectives from stakeholders which include government officers, local leadership and OPPL management. The study find out that, Through discussion with local community, they said that due to lack of officials of District administration and Oil and Gas company officials, the basic issues and problems of local community were not resolved.
