

## ABSTRACT

This research study investigates the key issues which are responsible in technical education downfall in Sindh. These issues are always responsible for the low admission, less job opportunities. So it is important to study these issues in order to improve technical education System and also identifies the areas where the key problems are taking place.

In this study data was collected from the students of the different technical institutes of Sindh. A sample of 135 students is collected from these institutes. This research has two stages. At first stage literature of pervious researchers was studied and interviews were conducted from technical education experts, in order to construct a questionnaire. Once the questionnaire was constructed, it is send to the students, in order to get their response. At second stage data collected was analyzed by SPSS. The linear logistic regression method was applied in order to identify key issues which are responsible for technical education downfall.

This study identifies that scope of technical education is not clearly define by the Government, and lack of Industries is also the major issues in technical education down fall. According to the students Shortage of Skill full Human Resources is the serious issue in technical education downfall, and also Lack of conducting Seminars, conferences and workshop is one of the serious issue in technical education downfall.
